

Differences Between Bootstrap 3 and Bootstrap 4

Bootstrap 4 brought some major changes. Adding new components, scrapping others. Here's the difference between Bootstrap v3 and v4 (alpha).

Note that Bootstrap 4 is currently in alpha release. This list will be reviewed as the development progresses.

Component	Bootstrap 3	Bootstrap 4
Global		
Source CSS Files	LESS	SCSS
Primary CSS Unit	px	rem
Media Queries Unit	px	em
Global Font Size	14px	16px
Grids		
Grid Tiers	4 tier grid system (http://www.quackit.com/bootstrap/bootstrap_3/tutorial/bootstrap_grid_system.cfm) (xs, sm, md, lg)	5 tier grid system (http://www.quackit.com/bootstrap/bootstra) (xs, sm, md, lg, xl).
Offsetting Columns	Uses <code>col-*--offset-*</code> classes to offset columns. For example, <code>col-md--offset-4</code> .	Uses <code>offset-*--*</code> classes to off: <code>offset-md-4</code> .
Tables		
Inverse Tables	Not supported.	Added inverse tables with the <code>.table-inverse</code> class.
Table Head Styles	Not supported.	Added table head styles with the <code>.thead-inverse</code> classes.
Condensed Tables	<code>.table-condensed</code>	<code>.table-sm</code>
Contextual Classes	Bootstrap 3 (http://www.quackit.com/bootstrap/bootstrap_3/tutorial/bootstrap_tables.cfm) doesn't use the <code>.table-</code> prefix for its contextual classes. For example, Bootstrap 3 uses <code>.active</code> whereas Bootstrap 4 uses <code>.table-active</code> . Other than that, both versions use the same 5 contextual keywords (active, success, info, warning, danger).	Added the <code>.table-</code> prefix for its

Component	Bootstrap 3	Bootstrap 4
Responsive Tables	The <code>.responsive-table</code> class must be added to a parent <code><div></code> (http://www.quackit.com/html/tags/html_div_tag.cfm) element.	Can add <code>.responsive-table</code> to <code><table></code> (http://www.quackit.com/html/tags/html_table_tag.cfm)
Reflow Tables	Not supported.	Added reflow tables with the <code>.table-responsive</code> class
Forms		
Horizontal Forms	Horizontal forms require the <code>.form-horizontal</code> class. Forms don't require <code>.row</code> when using grids (although this class is still a requirement on Bootstrap 3 grids (http://www.quackit.com/bootstrap/bootstrap_3/tutorial/bootstrap_grid_system.cfm) in general).	Bootstrap 4 dropped the <code>.form-horizontal</code> class. <code>.row</code> is no longer needed to display horizontal forms. Forms require the <code>.row</code> class with <code>.col-md-*</code> classes to display horizontally.
	Use <code>.control-label</code> when using grids for form layout.	Bootstrap 4 uses <code>.col-form-label</code> for form layout. * Note that Bootstrap 4 initially used <code>.col-sm-*</code> but subsequently changed this to <code>.col-md-*</code>
Checkboxes and Radio Buttons	Uses <code>.radio</code> , <code>.radio-inline</code> , <code>.checkbox</code> , or <code>.checkbox-inline</code> to display checkboxes and radio buttons.	Uses <code>.form-check</code> , <code>.form-check-inline</code> , <code>.form-check-label</code> , and <code>.form-check-input</code>
Form Control Size	Use <code>.input-lg</code> and <code>.input-sm</code> to increase or decrease the size of an input control.	Use <code>.form-control-lg</code> and <code>.form-control-sm</code> to increase or decrease the size of an input control.
Help Text	Use the <code>.help-block</code> class to display help text.	Bootstrap 4 uses the <code>.form-text</code> class. Bootstrap 4 forms don't have an <code>.help-block</code> class. Instead, the <code>.text-muted</code> class provides the flexibility.
Validation and Feedback Icons	The <code>.form-control-*</code> classes are not available in Bootstrap 3. To present icons on the input fields using Bootstrap 3, you need to use glyphicons (http://www.quackit.com/bootstrap/bootstrap_3/tutorial/bootstrap_glyphicons.cfm).	Dropped the <code>.has-feedback</code> class with the introduction of the <code>.form-feedback</code> class
Legends	No classes for styling the form legends.	Provides the option of using <code>.col-form-label</code> or <code><legend></code> (http://www.quackit.com/html/tags/html_legend_tag.cfm) to style it more like a label.
Custom Forms	Not supported.	Bootstrap 4 introduced custom form classes (http://www.quackit.com/bootstrap/bootstrap_4/tutorial/custom_form_classes.cfm) — completely custom form elements and defaults.
Buttons		

Component	Bootstrap 3	Bootstrap 4
Semantic Styles	Includes the <code>.btn-default</code> and <code>.btn-info</code> classes. The <code>.btn-secondary</code> class isn't available in Bootstrap 3.	Introduced the <code>.btn-secondary</code> class. Dropped the <code>.btn-default</code> class. Note that the <code>.btn-info</code> class was dropped in Bootstrap 4 but it has reappeared in Bootstrap 4.5. The <code>.btn-primary</code> class is still available in Bootstrap 4.
Outline Buttons	Not supported.	Introduced the <code>.btn-outline</code> class with an outline color. Introduced the <code>.btn-*outline</code> classes with an outline color. (The <code>.btn-*outline</code> classes were dropped in Alpha 3).
Button Sizes	The <code>.btn-xs</code> class is available.	Dropped the <code>.btn-xs</code> class (on available now).
Images		
Responsive Images	Use <code>.img-responsive</code> class.	Use <code>.img-fluid</code> class.
Image Alignment	Use <code>.pull-right</code> , <code>.pull-left</code> , and <code>.center-block</code> helper classes.	Uses <code>.m-x-auto</code> instead of <code>.center-block</code> level images. Can also use the various <code>.pull</code> -responsive helper classes, as well as <code>.text-*center</code> , and <code>.text-*left</code> image's parent. Can use the various <code>.pull-*no</code> classes.
Dropdowns		
Structure	Apply dropdowns to lists (i.e. using <code></code> (http://www.quackit.com/html/tags/html_ul_tag.cfm) and <code></code> (http://www.quackit.com/html/tags/html_li_tag.cfm)).	Dropdowns can be built with <code></code> (http://www.quackit.com/html/tags/html_ul_tag.cfm) and <code></code> (http://www.quackit.com/html/tags/html_li_tag.cfm) tags. Apply the <code>.dropdown-item</code> to a <code></code> (http://www.quackit.com/html/tags/html_li_tag.cfm) tag. (http://www.quackit.com/html/tags/html_button_tag.cfm) them all in a <code><div></code> (http://www.quackit.com/html/tags/html_div_tag.cfm) tag. <code></code> (http://www.quackit.com/html/tags/html_ul_tag.cfm) <code>.dropdown-menu</code> class applied.
Menu Headers	Apply <code>.dropdown-header</code> to the <code></code> (http://www.quackit.com/html/tags/html_li_tag.cfm) tag.	Apply <code>.dropdown-header</code> to the <code></code> (http://www.quackit.com/html/tags/html_li_tag.cfm) tag. (http://www.quackit.com/html/tags/html_h1_tag.cfm) (http://www.quackit.com/html/tags/html_h2_tag.cfm) longer uses <code></code> (http://www.quackit.com/html/tags/html_li_tag.cfm) to build dropdowns).

Component	Bootstrap 3	Bootstrap 4
Dividers	Apply the <code>.divider</code> class to the <code></code> (http://www.quackit.com/html/tags/html_li_tag.cfm) element (because it used lists to build dropdowns).	Apply the <code>.dropdown-divider</code> (http://www.quackit.com/html/tags/html_div
Disabled Menu Items	Apply the <code>.disabled</code> class to the <code></code> (http://www.quackit.com/html/tags/html_li_tag.cfm) element.	Apply the <code>.disabled</code> class to the <code><a></code> (http://www.quackit.com/html/tags/html_a_tag.cfm) element.
Button Groups		
Justified?	Supports justified button groups (via the <code>.btn-group-justified</code> class).	Not supported.
Extra Small?	Supports extra small button groups (via the <code>.btn-group-xs</code> class).	Not supported (dropped the <code>.btn-group-xs</code> class).
Navs		
Inline Navs	There is no <code>.nav-inline</code> class.	Can use the <code>.nav-inline</code> class displayed inline.
Navbars		
Colors	Limited (preset) color options. Supports inverse navbars but not the other classes.	New (preset) color options. Introduced <code>.navbar-light</code> and <code>.navbar-dark</code> classes.
Navbar Alignment	Use <code>.navbar-right</code> , <code>.navbar-left</code> to align components within the navbar.	Use the various <code>.pull-*</code> responsive helper classes. Can also use the various <code>.pull-float</code> classes.
Navbar Forms	Add the <code>.navbar-form</code> class to forms within navbars.	Bootstrap 4 dropped the <code>.navbar-form</code> class. Forms are now part of the <code>.navbar</code> class.
Pagination		
Default Pagination	Only requires <code>.pagination</code> to be added (to the <code></code> (http://www.quackit.com/html/tags/html_ul_tag.cfm) element that represents the list of pages).	Must also add <code>.page-item</code> to each <code><a></code> (http://www.quackit.com/html/tags/html_a_tag.cfm) element.
Pagers	Uses <code>.previous</code> and <code>.next</code> for aligning pagers.	Pagers have been dropped in Bootstrap 4. Uses <code>.pager-prev</code> and <code>.pager-next</code> classes.
Labels		

Component	Bootstrap 3	Bootstrap 4
Pill Labels	The <code>.label-pill</code> class is not available. However, Bootstrap 3 does have badges (http://www.quackit.com/bootstrap/bootstrap_3/tutorial/bootstrap_badges.cfm) (which achieves a similar visual effect). Badges were dropped in Bootstrap 4.	Labels have been replaced by tags Tags can use the <code>.tag-pill</code> for Introduced the <code>.label-pill</code> class which is more rounded.
Tags		
Supported?	No. "Tags" are called "Labels" in Bootstrap 3 (i.e. they use the <code>.label</code> class).	Yes. The <code>.tag</code> class was introduced to replace the <code>.label</code> class. This was done to disambiguate (http://www.quackit.com/html/tags/html_label_tag.cfm)
Jumbotron		
Full-Width	The <code>.jumbotron-fluid</code> class is not required on full-width jumbotrons.	Introduced the <code>.jumbotron-fluid</code> jumbotrons.
Progress Bars		
Uses <code><progress></code> (http://www.quackit.com/html/tags/html_progress_tag.cfm)?	Doesn't use the <code><progress></code> (http://www.quackit.com/html/tags/html_progress_tag.cfm) for progress bars. Instead, applies progress bar classes to nested <code><div></code> (http://www.quackit.com/html/tags/html_div_tag.cfm) elements.	Uses the HTML5 <code><progress></code> (http://www.quackit.com/html/tags/html_progress_tag.cfm) working with progress bars.
Glyphicons		
Supported?	Supported.	Not supported.
Typography		
Blockquotes	Bootstrap styles are applied to the <code><blockquote></code> (http://www.quackit.com/html/tags/html_blockquote_tag.cfm) element by default.	Introduced the <code>.blockquote</code> class to the <code><blockquote></code> (http://www.quackit.com/html/tags/html_blockquote_tag.cfm) element (i.e. styling this element)
Page Headers	The <code>.page-header</code> class is supported.	The <code>.page-header</code> class is not supported.
Description Lists	The <code>.dl-horizontal</code> class does not require grid classes.	The <code>.dl-horizontal</code> class requires grid classes.
Non-Responsive Usage		
Supported?	Supported. You can specify a layout to be non-responsive.	Not supported.
List Groups		

Component	Bootstrap 3	Bootstrap 4
Linked List Items / Button List Items	Apply <code>.list-group-item</code> to the <code><a></code> (http://www.quackit.com/html/tags/html_a_tag.cfm) element.	Apply <code>.list-group-item-action</code> (http://www.quackit.com/html/tags/html_a_tag.cfm)
Cards		
Supported?	Not supported.	Introduced in Bootstrap 4. Cards was previously provided by panels (http://www.quackit.com/bootstrap/bootstrap_panels.cfm) wells (http://www.quackit.com/bootstrap/tutorials/bootstrap_wells.cfm) and thumbnails (http://www.quackit.com/bootstrap/bootstrap_thumbnails.cfm)
Panels		
Supported?	Supported.	Not supported. Use cards instead.
Wells		
Supported?	Supported.	Not supported. Use cards instead.
Thumbnails		
Supported?	Supported.	Not supported. Use cards instead.
Breadcrumbs		
Classes	Uses the <code>.breadcrumb</code> class against the <code></code> (http://www.quackit.com/html/tags/html_ul_tag.cfm) tag.	Also requires <code>.breadcrumb-item</code> <code></code> (http://www.quackit.com/html/tags/html_li_tag.cfm) to make up the breadcrumb.
Carousels		
Carousel Item	Use <code>.item</code> class.	Use <code>.carousel-item</code> class.
Affix		
Supported?	Yes.	No.
